Oceanic

Explore your inner nature with the Stauna® experience

Every one of us is special and has earned a special means of relaxation. Why not pursue your personal wishes and needs, your individual kind of relaxation and create some unique moments of well-being with the patented Stauna® from Oceanic? It transforms one sauna into five: a classic sauna, a warm air bath, a tropical bath, an aroma bath and a soft steam bath. You simply choose the climate zone which suits your present mood, and the Stauna will automatically adjust the humidity and temperature to your precise requirements.

Relaxation individually interpreted

The relaxation offered by the Stauna® is not only extremely pleasant but also has a proven health benefit. Regular Stauna® sessions train the cardiovascular system and provide effective prevention of colds. Furthermore, the circulation-boosting climate in the Stauna® can reduce high blood pressure and alleviate circulatory disorders. Across the board, studies have shown that the Stauna® has a positive effect on the immune system. The skin, our largest organ, also benefits from this top-of-the-range beauty treatment, being cleansed, purified and simultaneously enriched with nutrients and minerals.

Stauna® Control System

Infusing the air with steam increases the humidity within the sauna. Air with higher humidity conducts heat more efficiently and therefore feels much hotter than dry air. For this reason steam rooms are normally set to a maximum of 60 degrees celcius where as dry saunas can reach up to 90 degrees celcius.

In order to safely control the amount of humidity within the sauna Oceanic have developed a unique Stauna control system. This system provides the user with 4 separate climates to choose from. Sauna, Caldarium, Saunarium and Tepidarium.

The diagram opposite shows the temperature and humidity range for each climate. The exact temperature can be modified within each climate using the keypad.

Oceanic

Traditional Sauna® Package

The 1kw mini steam generator comes with either the 4.5kw or 6kw sauna heaters. All the heating elements are controlled sequentially via the OC-ST control box. This allows accurate heat to be maintained within the cabin.

As the heater and steam generator will never be both running at full capacity the total maximum overall power consumption remains the same. I.e. 4.5kw or 6kw.

No mains water connection required

The mini steam generator is filled manually from above. There is a drain at the bottom of the unit which can be opened to empty the tank after use.

The lights on the front of the unit show the water level inside the tank.

Essential oils and fragrances can be added to the water or directly onto the steam vent.

Oceanic

Traditional Stauna® Cabin Range

The space requirements for both sauna heater and steam generator limit the range of Stauna cabins. All sauna cabins come with the required amount of Stauna® coat which is to be applied before and after installation.

Oceanic Stauna® Coat is a non toxic solution to prevent moisture being absorbed into the timber. Stauna Coat will not give off any harmful adores when heated.

D2030

2-3 bathers
1860 x 1350 x 1950mm

D2035

3-4 bathers

D3030
3-5 bathers
1860 x 1960 x 1950mm

Oceanic

Infrared Sauna® Cabin Range

Oceanic Infrared emitters are heretically sealed allowing the addition of a mini steam generator into most cabins within the domestic range.

The air temperature in an infrared cabin will not exceed 60 degrees there is no requirement for a separate control system and the mini steam generator is simply connected to a mains supply via a standard 13amp plug.

Stauna Coat is provided with all Infrared Sauna cabins.
